DETAILED ACTION

1. This Office Action is in response to the amendment filed on October 8, 2009. Claims 27, 33, 39, 45, 51, 53, and 55 have been amended to overcome minor objections. Therefore, Claims 27-29, 32-41, 43-46 and 48-55 are currently pending and have been considered below.

Allowable Subject Matter

2. Claims 27-29, 32-41, 44-46, and 48-55 are allowed.

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance:
The invention pertains to delivering a barcode to a mobile device wherein a message processor optimizes the said message to the mobile device by downgrading said message data responsive to stored mobile device capabilities and picture messaging protocols. The independent claims (Claims 27,39, and 51 each include the limitation that the optimized message is generated by downgrading said message data responsive to said stored display capabilities and picture messaging protocols. As per discussion between the Examiner and Applicant during prosecution on 7/31/2009 the prior art does not address the optimization of the message by downgrading to match the capabilities of the mobile device.

Art Unit: 3688

{Also see Abstract: A system for delivering coupons containing barcodes to a mobile device such as a mobile phone is disclosed. A message processor means (10G) generates message data comprising a coupon. A message optimizer means (116) generates an optimized message responsive to the message data and the capabilities of the mobile device (124). Preferably the capabilities of the mobile device comprise device attribute associated with a mobile device type, and are stored in a database means (110). The optimized message is transmitted to the mobile device. For basic mobile devices, simple text message including barcode number and associated text will be delivered. Otherwise, subject to the mobile device supporting the required display dimensions and color depth, a barcode image, picture, and/or multimedia content will be delivered.}

Prior art was found which (a) provides architecture for presenting to a user m-commerce transaction data that include machine-readable data forms that the customer can scan with the m-commerce (mobile) device (Petrovich US 7,155,405 column 2, lines 1-34 and column 16 lines 45-50); whereby compatible m-commerce devices may include an association of unique device IDs. Upon further search the Examiner also found prior art (Shields et al. US 7,318,073 abstract lines 1-1-17 and column 1, lines 32-51 whereby the system and method provide a mechanism for selectively identifying the type of information that can be downloaded to the mobile device, the system profile identifies the type of information a particular mobile device supports, the server downloads the identified type of information to the mobile device without downloading undesired types of information (b)) enhancing the visual effects and image quality which utilizes the display area effectively during video playback (Kashio US 7,009,650 column 1, line 62 and continued to column 2, line 12) whereby a storage and display control means to read out video stored in the storage means to perform video playback in the display practicable area size of the display means and whereby the customer that chooses to register a portable device and subscribes to the disclosed architecture would facilitate retrieval from the database.

However, no additional prior art has been found which discloses a message optimizer which generates said optimized message by downgrading said message data responsive to said stored display capabilities and picture messaging protocols.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lewis et al. (7,617,328) discloses a system for translation and communication messaging protocols into a common protocol.

Shields et al. (7,318,073) discloses a system and method for downloading information to a mobile device such that undesired information is not downloaded to the mobile device.

Webb et al. (6,877,661) discloses a scan able barcode display and method for using the same via a wireless device by means of linearly polarized light and a wave retarded..
